

LEGEND FITNESS®

PRO SERIES POWER CAGE

(Part #3221)

This imposing piece of equipment towers over the weight room. It is, quite simply, the strongest and most versatile cage on the market. Period. Designed and made in Knoxville, TN to shoulder the load for the most discerning athletes the world over, the Pro Series Power Cage is world class.

Built from hulking 3x3-inch, 11 gauge tubing and featuring the most interior space of any cage, with an indestructible 7 gauge chrome racking system and finished off with durable yet replaceable UMHW wear guards, the 3221 was designed to survive all the abuse that any powerlifter, football team or rocket launcher could throw at it.

The Ultimate in Strength & Rigidity

11 gauge 3x3-inch tubing and 7 gauge, chrome-plated racking with laser-cut numbering. Like most Legend Fitness items, the Pro Series Power Cage has been developed with three-dimensional CAD software to use as few fasteners as possible. This entire rack only has 20 bolts across 6 joints, reducing the possible points of weakness and maintenance. Compare that to competitor's cages which use a bajillion bolts (roughly speaking... could be a kajillion).

Monster Hooks

Oversized, dual peg, fully welded bar catches with carry handle, number window and extremely durable yet replaceable polymer contact surfaces. Extended reach profile of hook increases safety without getting in the way. No metal-to-metal contact with the bar protects the knurling and means no rust, no paint chips and more energy absorption. In other words, the part of the cage you interact with most is AWESOME.

Safety When You Need It

The safety arms were overbuilt for when something slips, featuring not only a 3x2-inch cross section and ABS wearguards, but an internal, solid, 1-inch racking rod.

Lots of Storage

Twelve chrome-plated, frame-welded, numbered, Olympic-size plate storage pegs that are slightly angled for safety. Plus two angled storage pegs for resistance bands/chains, and upright bar storage for up to 4 Olympic bars (can also hold the optional dip attachments and bench rods for the bench docking system) that is safer than hanging designs.

Extra Versatility

The Pro Series Power Cage also has built-in lower band pegs for band resistance exercises, built-in upper band pegs for band assistance exercises, and a multi grip pull-up bar. A bench docking system is available at no extra cost.
