

LEGEND FITNESS®

PERFORMANCE SERIES HALF CAGE

(Part 3142)

The Legend Fitness Half Cage features an open design wide enough and deep enough to accomplish all of your goals, yet its footprint is small enough to allow you to keep more space in your weight room.

The premier half cage. This is our top-selling cage among high schools and those with floorspace and/or budget concerns.

A frame welded from 3x3-inch tubing with only 8 frame bolts (compared with the competition's 20 or more) means that this is the most rigid half cage you'll look at today. Or any day.

Other class-leading features include 2-inch hole spacing for the ultimate in flexibility for hook and spotter arm placement, 12 chrome weight horns (again, welded to the frame, not bolted), the strongest welded J-hooks in the world, extended base with bolt-down tabs for extra stability and safety, and two very tough spotter arms with 1-inch racking pins. Lifting area is 54 inches deep. Spotter arms reach 24 inches from the front of the uprights, which feature laser-cut hole numbering. Each upright is a single, fully welded piece for ease of assembly and unparalleled rigidity.

NOTE: On Performance Series cages, all attachments are in the Silver Vein finish. When the Two-Tone Powder Coat Finish option is selected, this allows a second color to be applied to the crossmembers only. However, if the Monster Hooks option is selected along with the Two-Tone option, the second color can then also be applied to the hooks and safety arms.

Bar, bench and weights sold separately. Pro Style Crossmember, Swivel Grip Handles, and Lower Band Pegs shown on in images above are optional extras.
