

LEGEND FITNESS®

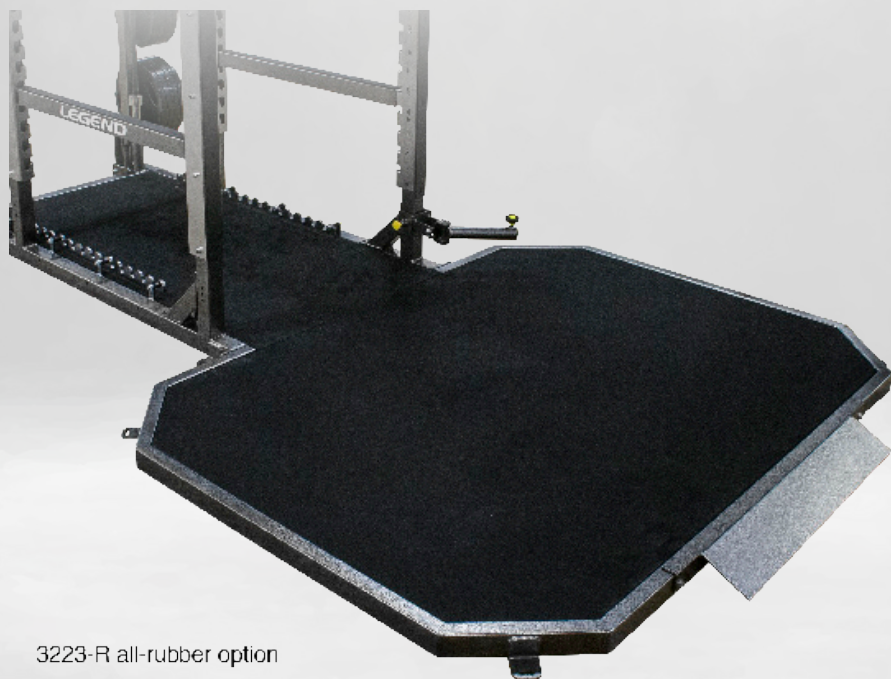

PRO SERIES INSERT PLATFORM

(Part #3223)

- Handmade tongue-and-groove oak footing area.
- Three-piece tube frame more resistant to dents than channel steel.
- Improved wood finish is mirror smooth, won't chip or flake.
- Also available with an all-rubber platform as 3223-R.

3223

3223-R all-rubber option

Updated in 2009, our octagonal lifting platforms make the perfect complement to our Pro and Performance Series Cages by providing a 6x8-foot lifting area with a handmade oak insert filling the inside of the cage area. Unlike the channel frames of some of our competitors, our frame is constructed from 3x2-inch rectangular tubing for greater dent resistance. The frame consists of only three pieces. Several layers of wood provide toughness beneath the top layer of thick, precision cut rubber and tongue-and-groove hardwood, and our unique hardwood finish will not flake or chip.

Tough as nails and great looking, the 3223 makes a great addition to any serious training facility.

Available in all standard frame colors, while the ramp section in front is only offered in black.

Also available as an all rubber platform (3223-R), but a logo is not available with this option.

Note: The inside dimensions of different cage models will vary, and as a result each 3223 is designed to fit the cage it is ordered with. This may prevent a 3223 to be switched between other models of Legend racks or cages. Not compatible with 3121 Power Rack, 3121-V Varsity Power Rack, 3138 Peg Squat Rack, or 3230 Combo Cage.
